

Child Find

Child Find is a statewide program provided at no cost to the family by the Tioga County Health Department.

The purpose of the Child Find program is the early identification of children who may have a delay in areas of growth and development. Needed services can then be provided free of charge from the Tioga County Early Intervention Program.

The parent/guardian is sent a developmental questionnaire starting at six months through 36 months to monitor the child's growth and development by completing the questionnaires and returning them to the Child Find Coordinator.

The goal of the program is to identify a child's developmental needs early and, working closely with the child's primary care provider, provide services to enhance the child's progress. This also provides the family the reassurance of a periodic assessment and feedback on a child's growth and developmental status.
